Recurring Active Users *

* The Recurring Active Users (ReAU) metric is a key performance indicator that measures the number of unique users who engage with our product on a regular basis over a calendar year. This metric helps us understand not just the breadth of our user base, but the depth of engagement among our users.

P.S. We are offering internships...

In Person. In Madrid. At our new Spanish HQ.

Internship Projects 2025 3.0

We are offering internships which can be full- or part-time, from 3 to 6 months - these details can be discussed during the application process.

We are accepting applications from students of European universities, including holders of student visas (hiring restrictions may apply in the latter case), as well as students from the UK, Serbia and Armenia.

The preferable internship format is onsite, relocation options are available.

We do not offer visa/permit support within the internship framework.

27.02 – 05.05.2025

Collection of applications from students	27.02 – 07.04
Interview	27.02 – 30.04
Feedback and final results	27.02 – 05.05

Applications for projects

You can select from 1 to 5 projects to apply in this admission. Then you will need to solve a test task, which may differ from project to project. Check your personal details to apply for projects.

Help The Developer

"Create an innovative website, application or plugin that simplifies the lives of developers."

Case description

Help the Developer

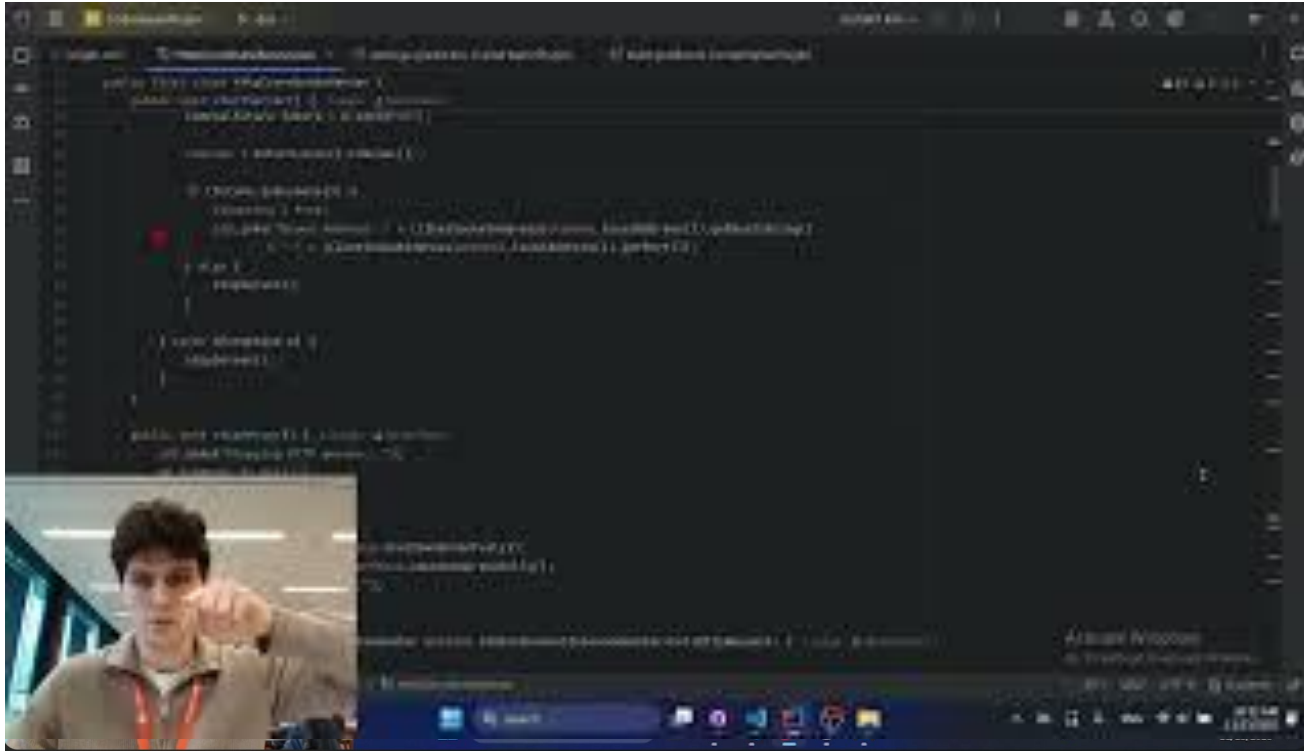

Website, Application, IntelliJ or PyCharm-based plugin with the primary purpose of making the lives of developers easier:

- Routine test creator or
- Refactor suggester or
- Your Idea → anything the team comes up with, can be even on META level. The challenge is to create an application that will make your coding experience more comfortable.

Final project: an IDE plugin, a web-app, a desktop-app, a mobile app...

How to start: useful resources

Basic IDE plugin

If you consider implementing a **plugin** for JetBrains IDEs, we could recommend several resources:

- JetBrains Academy courses:
 - [IDE Plugin Development Course](#) - basics about PSI and creating plugins
 - [Coroutines and channels](#) - a course about using coroutines in IntelliJ IDEA
- To start implementation quickly, you can use [IntelliJ Platform Plugin Template](#) and IntelliJ [Platform Plugin SDK documentation](#)
- [Here](#) and [here](#) you can find examples which demonstrate how to use OpenAI models inside the IntelliJ IDEA plugin
- To inference ML models inside the plugin, you can use [KInference](#) library

Multiplatform, modern, and concise programming language

Powering development for backend, mobile, web, desktop, and data science, Kotlin offers many ways to reuse code between platforms for productive programming.
